The www.DigitalVisions.com site has tutorials on Photoshop for beginners *

www.LearnPhotoshopCS6.com contains tutorials on the software's features and tricks. * See "Creating a JPEG Gallery" for details on editing JPEG files. Creating JPEGs from Scratch It's very simple to convert image-file formats to JPEG (see the earlier section titled "Creating image files" for how to do this) — even for Photoshop users who never touch a JPEG. But saving your file as a JPEG format doesn't always create the best file. And your choice of color space has a big impact on the quality of your JPEGs. You may want to use Photoshop's built-in file-saving options to save your file as the best quality JPEG format for the task at hand, but because of space and size limitations, you may have to work with a smaller resolution JPEG. You can also create JPEGs from scratch (by using Photoshop's JPEG capabilities) for particular situations. The following sections show you how to create JPEGs from scratch, with options available. No matter which options you use, the steps are the same: 1. **Open a new file and choose Image→Mode**. The Save for Web dialog box appears. 2. Choose JPEG from the Save For Web Format list. 3. Then choose JPEG quality from the Format drop-down menu. 4. Choose a target file size from the Size drop-down menu. See the upcoming "Selecting a Best Quality JPEG" section to understand how file size matters when deciding which image format to use, and how to choose the best quality JPEG for your needs. 5. For this example, choose 500 KB. 6. Check the File Name box. You can create a file with this name, or you can click the tiny filename icon and type a new name. Don't worry that you can't put in a very long filename; the program won't let you save a very large file. 7. Choose Preview from the Quality drop
